10+ Years of Experience

Freelancer - Web-based app to control and track packages
2015-Present

- This web was made with ReactJS and Bootstrap 4.0 the back-end uses MeteorJS, this web app helps to control the flow of the packages that arrive daily and help customers to know when the package is ready to pickup.
- The mobile application track his packages and sign them before pick up, this app send alerts to notify the status of the packages, the app was developed with React Native and build for Android.

Freelancer - Web-based tracking platform using GPS devices

- Establishing a communication channel to decode the data coming from the GPS device, using nodeJS server to manage sockets.
- A web platform was made for consulting in real time the vehicles attached the GPS device, MeteorJS was used as Back-End performing very well with Angular 2 JS as Front-End.

Freelancer - Web system to control an inventory

- A project for a small business to manage the inventory of the products, this program was developed in ReactJS and Bootstrap 3.3.7 creating a great responsive UI, for the Back-End i created a RESTFul API with Express JS. This project help me to improve my skills to manage MongoDB a non-relationship database.

Senior developer at criminal justice system, attached to Baja California department of justice
2013-Present

- My main activity is support and optimize the main application that controls the whole schedule of audiences and organize the entire legal process by creating documents signed through electronic signature, all the technology implemented in this project is in .NET C# and DevExpress.
- Also i have projects that my job is designing and developing web applications using new javascript technologies with html5.
- In this job improve my skills for relationship database with Informix and used LINQ to perform better code practices.

Web Developer, Secretary of Public Security of Baja California
2008-2013

- Meeting with clients to discuss the project requirements & workflow
- Creation of web and desktop solutions to achieve the department's objectives using PHP framework and Oracle database.
- This job gave me the opportunity to expand my creativity and skills. They put their trust in me to give advice on technological decisions for each new project.
